

PRODUCT INFORMATION 68

AVK TAPPING SADDLE SERIES 727/08 WITH INTEGRATED CUTTER TYPE SWIC ST

Dear Business Partner

We are pleased to introduce a new product in the wide range of AVK products. The SWIC ST saddle is for metal pipes. The saddle is universal which means that the same saddle unit can be used for the entire diameter range from DN 80 – DN300, and the pipe is then mounted with the well-known Stirrup from AVK Rewag.

Output thread is available from 1/2" to 2".
The saddle unit is well suited for water installations.

The tapping itself as shown in the above picture requires few tools to be carried out:

- an auxiliary tool to rotate the cutter and
- an AVK hand wheel with handle to operate the auxiliary tool. (Please see picture on the next page.)

Please find below gross price for the SWIC ST tapping unit.
The auxiliary tools are a one-off order.
For installation, please order Stirrup in the necessary pipe size.
Prices according to the AVK global price list 2007.

Product	Thread connection	Gross Price
Saddle Head	BSP 1/2", 3/4", 1", 1 1/4", 1 1/2", 2"	420 €

Enclosed:

- Data sheet
- Mounting instructions

Order handling:

Please contact the AVK Logistics department for information on discounts and delivery.

Kind regards
